

The Bionic 880 photon therapy provides relief in a natural way.

Body and soul are smoothly rebalanced by the **Bionic 880** photon therapy.

The immune system is strengthened, hormones are harmonized and cell regeneration is stimulated.

The **Bionic 880** photon therapy reduces the level of cortisol, which is considerably raised with stress. By stimulating the 'happiness hormones' serotonin and endorphin, a sense of relaxed well-being is generated.

An immediate and long lasting anti-stress effect is induced. Thus, the **Bionic 880** photon therapy is a natural answer to the stress symptoms of our times.

Your health is your greatest asset.

Your therapist will gladly talk about further details with you.

**No
stress,
please!**

Bionic 880 Photon Therapy

**...and you feel
relaxed and free!**

What are the reasons for stress?

In these times, stress is generally caused by excessive work, by private and job-related problems like existential threats, mobbing, overload by increased requirements, fear of loss of job, pressure to succeed, difficult family situations like problems in partnership or education of children, school and exam nerves and other.

What happens in our organism when stressed?

Those problematic situations cause an increased release of stress hormones in the body, like Adrenaline, Noradrenaline and Cortisol.

A constant load of the organism causes a permanent high level of those stress hormones. A natural ease of this tension is impossible.

This may be the reason for the development of serious mental and physical diseases. But even before, stress may reduce performance capability considerably.

Typical symptoms of stress:

- sensitivity to illness
- indisposition
- nervousness
- bad temper
- depressions
- tiredness
- fatigue
- listlessness
- anxiety
- pain (mostly head- and backache)
- cardiac and circulatory troubles
- intestinal disturbances
- increase of addictive behavior
- acidification of the body
- deterioration of concentration and performance
- weight and digestion problems
- tensions, mostly at neck and shoulders
- sleep disorders
- etc.
